

THE FOURTH DIMENSION FROM A PLASTIC POINT OF VIEW

IN plastic art, I believe, there is a fourth dimension which may be described as the consciousness of a great and overwhelming sense of space-magnitude in all directions at one time, and is brought into existence through the three known measurements. It is not a physical entity or a mathematical hypothesis, nor an optical illusion. It is real, and can be perceived and felt. It exists outside and in the presence of objects, and is the space that envelops a tree, a tower, a mountain, or any solid; or the intervals between objects or volumes of matter if receptively beheld. It is somewhat similar to color and depth in musical sounds. It arouses imagination and stirs emotion. It is the immensity of all things. It is the ideal measurement, and is therefore as great as the ideal, perceptive or imaginative faculties of the creator, architect, sculptor, or painter.

Two objects may be of like measurements, yet not appear to be of the same size, not because of some optical illusion, but because of a greater or lesser perception of this so-called fourth dimension, the dimension of infinity. Archaic and the best of Assyrian, Egyptian, or Greek sculpture, as well as paintings by El Greco and Cézanne and other masters, are splendid examples of plastic art possessing this rare quality. A Tanagra, Egyptian, or Congo statuette often gives the impression of a colossal statue, while a poor, mediocre piece of sculpture appears to be of the size of a pin-head, for it is devoid of this boundless sense of space or grandeur. The same is true of painting and other flat-space arts. A form at its extremity still continues reaching out into space if it is imbued with intensity or energy. The ideal dimension is dependent for its existence upon the three material dimensions, and is created entirely through plastic means, colored and constructed matter in space and light. Life and its visions can only be realized and made possible through matter.

The ideal is thus embodied in, and revealed through the real. Matter is the beginning of existence; and life or being creates or causes the ideal. Cézanne's or Giotto's achievements are most real and plastic and therefore are they so rare and distinguished. The ideal or visionary is impossible without form; even angels come down to earth. By walking upon earth and looking up at the heavens, and in no other way, can there be an equilibrium. The greatest dream or vision is that which is *regiven* plastically through observation of things in nature. "Pour les progrès à réaliser il n'y a que la nature, et l'œil s'éduque à son contact." Space is empty, from a plastic point of view.

The stronger or more forceful the form the more intense is the dream or vision. Only real dreams are built upon. Even thought is matter. It is all the matter of things, real things or earth or matter. Dreams realized through plastic means are the pyramids and temples, the Acropolis and the Palatine structures; cathedrals and decorations; tunnels, bridges, and towers; these are all of matter in space—both in one and inseparable. MAX WEBER.
