

A SURE ROAD TO SUCCESS

Why experiment when time has proven that *Quality* is synonymous with all lenses bearing the name:

GOERZ

The *Hypar*, a new portrait lens intended to meet the requirements of photographers who wish a lens equally efficient for standard commercial portraiture and for the impressionistic rendering of character which distinguishes the greatest photographic portrait artists of to-day. It works at a speed of F 3.5-4.5 and produces softness of focus without "fuzziness."

The *Dagor*, F 6.8, the best all-around lens in the market: speed sufficient for most work; wonderful covering power; perfect definition; back combination may be used as a long-focus lens.

The *Celor*, F 4.5-5.5, especially adapted for high-speed work. The *par excellence* lens for *color* work.

GOERZ lenses can be fitted to any and all makes of cameras: Ansco, Century, Graflex, any Kodak, Premo, Poco, Reflex, or Seneca. Have your dealer order one for you for a *ten days' free trial*.

C. P. Goerz American Optical Co.
